There are many variations of trojan programs. These programs differ in the ways in which they enter the computer and the ways in which they perform. There are two main types of trojan programs. They are: Hidden Trojans, Undetected Trojans. A Trojan is a computer program. It is installed on the hard disk without the owner's knowledge, and the owner cannot start the program. Let's discuss these two types: **HIDDEN TROJAN** **NUCLEAR** Very similar to viruses, Trojan is a computer program that can be used to install additional programs for monetary gain. A trojan can be considered a virus that is undetected. These programs enter your computer without your knowledge. It is also very similar to spyware and adware which we will discuss in the next paragraph. These programs also enter the hard disk and your system may stop working. These are the main characteristics of trojans **Powerful Hidden Advertised Unidentifiable and undetected No remedy** **Continuously active Slow your computer** These programs act as a worm, a shortcut, a Trojan horse or a worm. The names given to these programs tell their general purpose. Using these names, you can gain an idea of the risks that are involved. Trojans are used in all sorts of illegal activities. Trojans can be used for: Money laundering, Credit card theft, Online theft, Unauthorized access to another account or system, Illegal files distribution, Stealing bank account information and Software that steals. Trojan is often used in computer crime. As you know, Trojans can take over or damage your computer and steal your files, credit card information and more. Undetected Trojans can steal information from your system and then send it to the trojan ' 09e8f5149f
