Intuit QuickBooks Point Of Sale V80 MultiStore BEAST

Intuit QuickBooks Point Of Sale V8.0 MultiStore BEAST,
312.3 MB, 26Â .Q: Issue with core data in Swift 3.0 I am
developing an iOS app with swift and I have a core data
database. I am trying to get the value of the data in the
database but nothing is returned. I have a value in the

entities named "long". I have tried replacing it with "text" and "string" but nothing is returned in my switch statement. Here is my code: func queryFinish(data: AnyObject, err: NSErrorPointer) { let context: NSManagedObjectContext = data as NSManagedObjectContext self.results = [] for item in data as! [Long]{ let entityDescription = NSEntityDescription.entityForName("Entity", inManagedObjectContext: context) let fetchRequest = NSFetchedRequest(entityName: entityDescription!.name!) let predicate = NSPredicate(format: "self.itemID == %@", item) fetchRequest.predicate = predicate do { let fetchedResults = try context.fetch(fetchRequest) for item in fetchedResults as! [Entity] { if let name = item.itemName.lowercased() { self.results.append(name) } } } catch let error as NSError { print("Could not fetch \ \(error), \ \(error.userInfo)") } } } I used print statements to test and the data was successfully printed.
