. . There are no tags in this repository. This means that all tags used in this repository will not be transferred from repository to repository. The repository where all your tags are stored can have multiple repositories. For example, if you added a tag to the tag repository, then that tag will be stored in the tag repository within the tag repository. All repositories that store tags are merged into a tag repository. You can combine multiple repositories into a single tag repository by adding a tag to the tag repository.

Biomimetic synthesis and catalytic activity of the prodrugs of 3-cyanovinyl derivatives in the presence of silica matrix. We report the biomimetic synthesis and catalytic activity of the prodrugs of 3-cyanovinyl heterocyclic compounds using silica matrix. The silica matrix system was used to develop a very efficient, environmentally friendly route in the formation of the 3-cyanovinyl derivatives. The biomimetic reactions were highly efficient in terms of conversion, selectivity and recyclability. The catalyst was stable and showed excellent reusability for the prodrugs formation. The 3-cyan
